Panel 1: Prescribed fire (PF) data needs related to air quality and health

Panelists:

Di Tian, Georgia EPD

Rick Gillam, U.S. EPA Region 4

Rish Vaidyanathan, CDC

Scott Goodrick, USDA Forest Service

Goal

- The goal of this panel is to discuss the prescribed fire data needed to conduct air quality and health impact analyses.

Questions to be addressed:

- What types of prescribed fire (PF) data are most relevant to air quality and health?

- What PF inputs are needed by the air quality and health impact models?

- Can you give examples of how PF data are used?

- How can we compare the $PM_{2.5}$ and health burdens of PF with those of wildfires?

- What are the major sources of uncertainty in estimating the impacts of PF on air quality and public health?
